DETAILED ACTION

1. The request filed on 08/25/2003 for a Request For Continued Examination (RCE) under 37 CFR 1.114 based on parent Application No. 10/036845 is acceptable and a RCE has been established. An action on the RCE follows.

Information Disclosure Statement

2. The information disclosure statement filed 08/25/2003 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because Applicant has failed to provide the actual references. The IDS listing (PTO 1449) has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609 ¶ C(1).

Claim Objections

3. Claims 3-13 have been withdrawn from consideration because the claims are dependent upon canceled claim 1.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3651

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 2, 14-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Ward et al. 5,857,413.

Ward '413 discloses an automated stowage and retrieval system and a method of operating thereof per claimed invention. Ward '413 system discloses a plurality of rectangular motorized pallets contained in a matrix (Figures 1 and 5). Each of the pallets comprises rollers and driving mechanism for bi-directional horizontal movements between pluralities of zones within the matrix. The matrix having at least one vacant zone adapted to the size of at least one of the pallets. The system comprises a programmable controller capable of receiving input regarding a desired load and configured to communicate with the plurality of driving mechanism on the pallets to move a number of pre-selected pallets having the desired load to a predetermined location.

6. Claims 2, 14-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Day, III et al. 5,395,199.

Day '199 discloses an automated stowage and retrieval system and a method of operating thereof per claimed invention. Day '199 system discloses a plurality of rectangular motorized pallets contained in a matrix (Figures 1-3). Each of the pallets comprises rollers/wheels and driving mechanism for bi-directional horizontal movements between pluralities of zones within the matrix. The matrix having at least one vacant zone adapted to the size of at least one of the pallets. The system comprises a programmable controller capable of receiving input regarding a desired load and configured to communicate with the plurality of driving mechanism on the pallets to move a number of pre-selected pallets having the desired load to a predetermined location.
